

Paired global flash · 512 × 288 neural processing

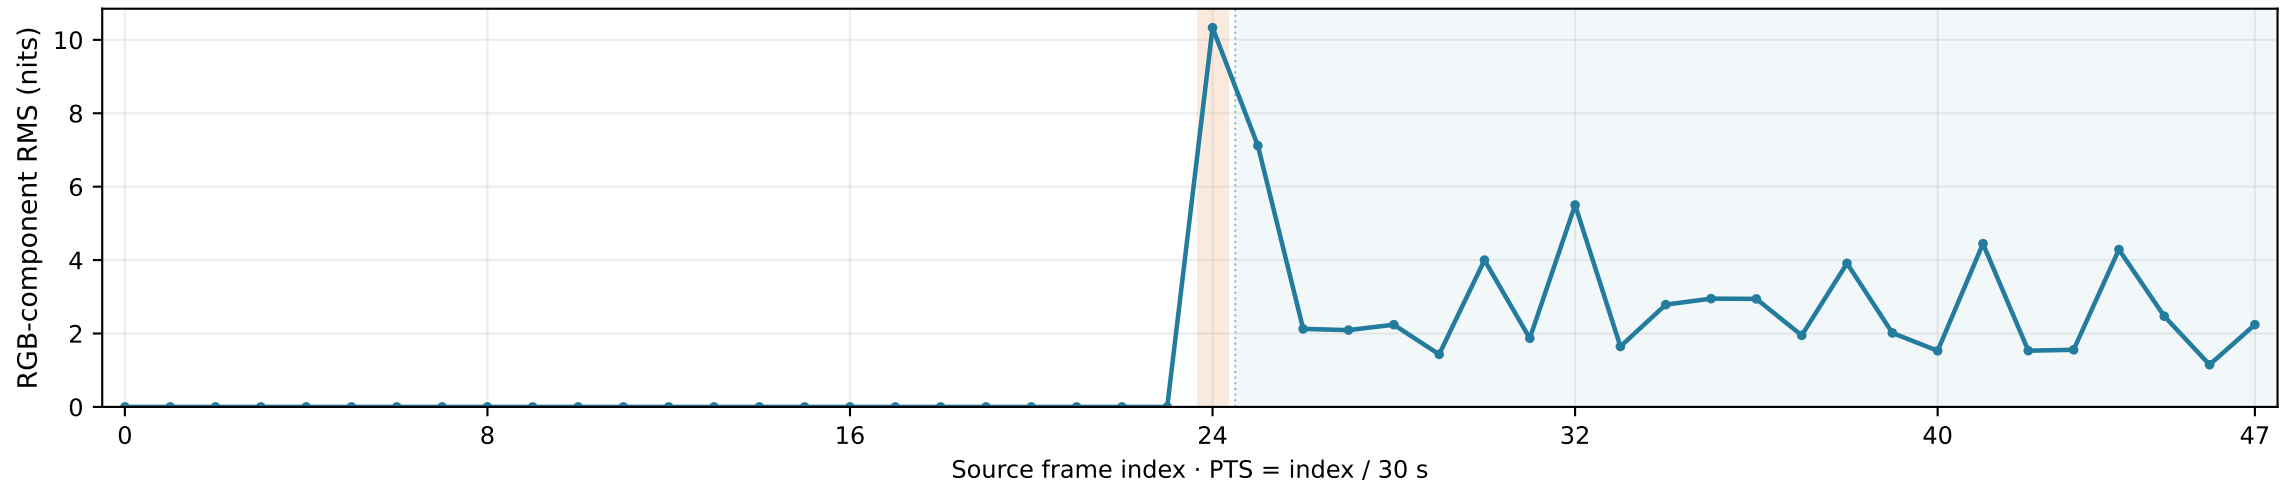

640 × 360 source/reference · one-frame source ×1.5 at 24 · unchanged automatic temporal policy

Control E – O Flash E – O

A · Both enhancement residuals · all 48 frames

B · Paired residual difference D · all 48 frames

$$D = (E_{\text{flash}} - O_{\text{flash}}) - (E_{\text{control}} - O_{\text{control}}).$$

Orange: event 24. Blue: returned input 25–47. All 48 frames remain on the complete series scales.

Equal-weight RGB components, not luminance or a perceptual score. No accepted recovery threshold or quality claim.
