

Synthetic grain-like contrast · 512 × 288 neural processing

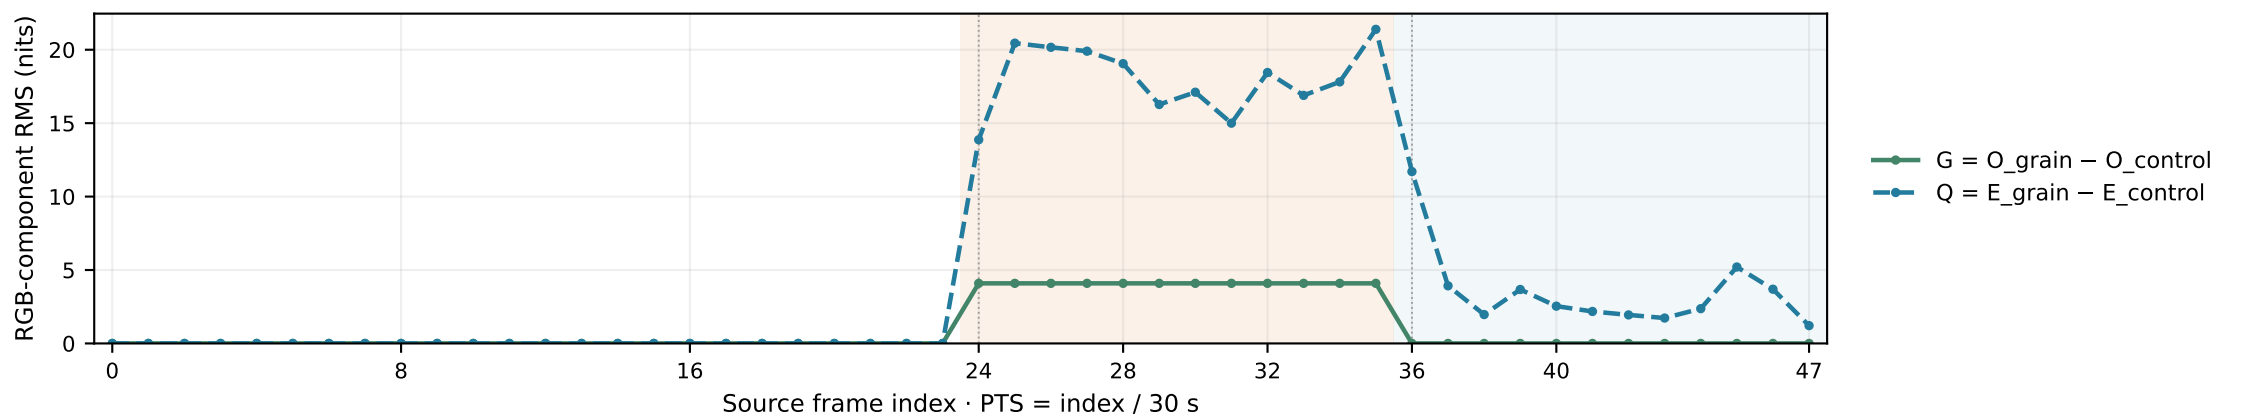

640 × 360 source/reference · nominal $\pm 1/32$ achromatic contrast in 2 × 2 cells at frames 24–35

Orange: active input 24–35. Blue: clean input returns 36–47. Dotted boundaries retain onset and removal.

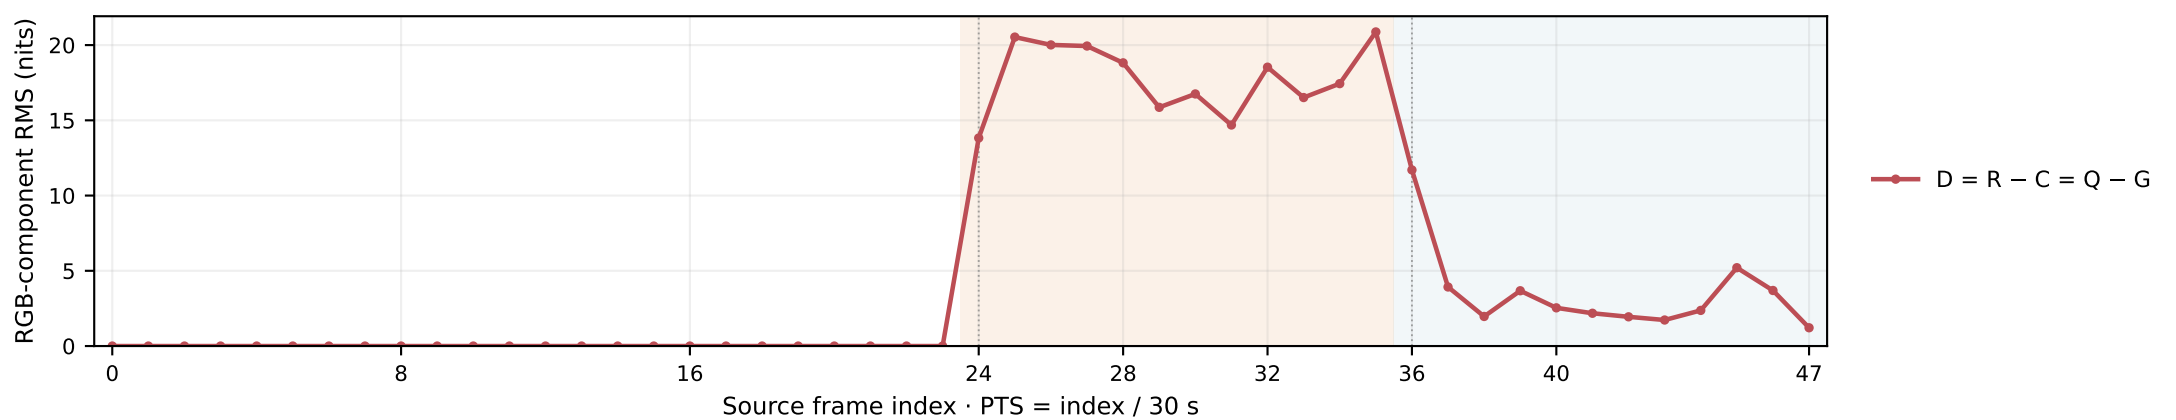

A · Enhancement residuals · all 48 frames

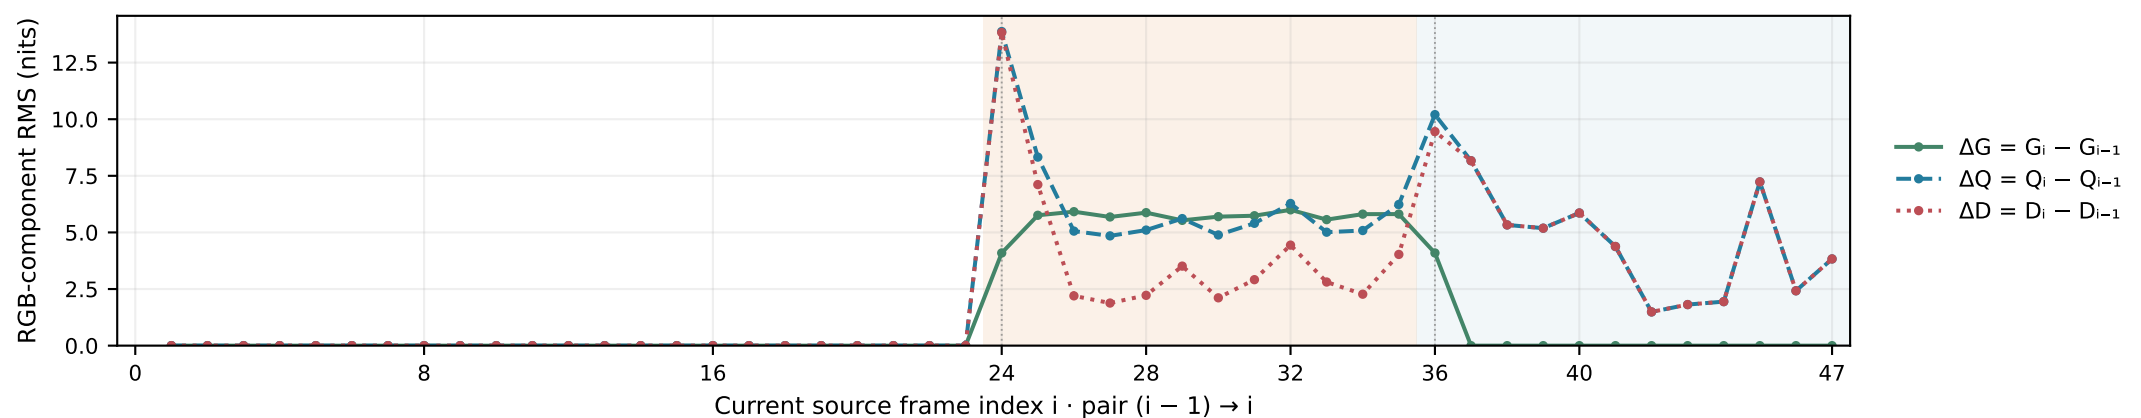

B · Source and enhanced-output differences · all 48 frames

C · Paired residual difference · all 48 frames

D · Adjacent component changes · all 47 pairs

C/R: enhancement residuals. G/Q: source/output differences. D: paired residual difference.
 Δ fields subtract adjacent component arrays before RMS; boundaries 23→24 and 35→36 are retained.
