

Controlled pan and occlusion · M3 neural reference
960 × 540 source/output · 512 × 288 processing · enhanced minus original

Same visible material in consecutive frames · all supported comparisons
Static input: 0-7 and 35-47; motion: 8-35. Only frame 0 reports a history reset.

All reveal cohorts · residual change from the moment of reveal

Exact source-material correspondence; unsupported predecessors are omitted.
Residual changes are observations, not a ghosting score or accepted quality threshold. Final 47 is later context, not an ideal target.
