

Cup-wall trajectories · 320 × 192 neural processing

Bounded model input and pre-bound baseline · both 1920 × 1080 output · same fixed, unaligned ROI

Original Identity Enhanced

Linear BT.2020 $Y = 0.2627R + 0.6780G + 0.0593B$. Identity overlaps original at this scale.
All 30 timestamps per capture retained; shared axes by column. Shaded bands mark the largest E–O pair.

New E–O maximum and RMS adjacent changes are larger than baseline; mean E–O is smaller. No improvement claim.
No motion compensation, adaptive mask or photometric normalization. No perceptual acceptance or physical HDR claim.
Same source, model and recorded settings except model-input-range marker; runtime code and binaries differ.
